**Elcomsoft Forensic Disk Decryptor V2.10 Build 567 Hard Disk  
Decryptor |VERIFIED|**

[Download](#)

---

hibernation is a process that allows a system to store its ram contents to a file on the hard disk. an operating system's ram contents are immediately copied to the hard disk when the system suspends or hibernates. the hibernation file contains the ram contents, the hidden virtual memory area, the system registry and other user-specific data. this file is typically stored in the hibernation subdirectory of the c: drive. the elcomsoft system recovery wizard is the simplest way to get started with the investigation. it allows: access to encrypted volumes for virtual offline investigation without saving the data to another volume decrypting volumes and containers for the first time creating a virtual forensic workstation in a few mouse clicks connecting encrypted volumes and containers to other computers for remote investigation writing an investigative report once installed, elcomsoft system recovery automatically starts on all computers. the

---

program provides easy access to the tool's features: full support for veracrypt, luks/luks2, bitlocker, and filevault disk encryption types; fast startup; support for mounting encrypted volumes; and data transfer to a computer that has not been set up as a forensic workstation. elcomsoft system recovery allows conducting a virtual offline investigation of a storage device, since the tool can read the files in an encrypted container without the need to store them to another volume. all tools can be performed in windows 7, 8, and 8.1 operating systems. elcomsoft system recovery supports up to three user accounts on a single computer. additionally, it allows tracking and reporting on the investigation progress.

**Elcomsoft Forensic Disk Decryptor V2.10 Build 567 Hard Disk Decryptor**

elcomsoft forensic disk decryptor is the only bitlocker recovery solution that allows

---

you to recover the exact physical location of encrypted volumes on a mac. the utility allows you to recover the physical location of encrypted volumes on a mac without requiring the users' password. elcomsoft forensic disk decryptor is the only tool that can read and process all bitlocker volumes that are created on a windows system.

although this program is not able to decrypt the containers that are encrypted on a mac, it can recover the password that was used to encrypt the bitlocker container. the utility allows you to easily decrypt bitlocker volumes on a windows system and display their physical location on the computer's hard disk drive. unlike other bitlocker recovery solutions, elcomsoft forensic disk decryptor is able to show the exact physical location of the encrypted volumes on a mac or windows system. this utility reads encrypted volumes that have been created on a windows system and decrypts them

---

without requiring any user password. when a computer hibernates, its logical memory contents are saved to a special file, called hibernation file or session file, located on the users hard disk. this file contains the information needed to restore the computers memory to its state when the computer was powered down. the hibernation file contains the binary keys used to encrypt and decrypt the volume data. extraction of these keys from the hibernation file is how elcomsoft forensic disk decryptor operates and is the main focus of this article. to extract the hibernation file from hibernation.pth file, elcomsoft forensic disk decryptor uses a binary peimager tool. it is a relatively old tool, but still one of the most powerful ones available. just check the pei demo video below to see it in action. 5ec8ef588b
